

Project Design Phase

Data design: dependent choice fields

Subcategory is made dependent on Category using the dependent-field option on the choice list. Each Subcategory choice is tied to its Category's backend name, so only the relevant choices appear for the selected Category.

Subcategory choice	Depends on Category (backend name)
Wi-Fi	Network
Projector	Hardware
Forgot password	Access
Slow computer	Performance

Configuration steps

- 1 Open the form and scroll down to the Choices section.
- 2 For each Subcategory option, set the Dependent value to the Category's backend name (table above).
- 3 Save the form.
- 4 Result: each Category displays only its own Subcategory choices.

Automation design

Trigger: Record Created, Condition: Category is Empty

Logic: If / Else If branches on Short Description keywords, each with an Update Record action

Final action: Send Email to the caller
