

Project Development Phase

Milestone 3: Automation using Flow Designer and Email Notification

Activity 1: Create the flow

- 1 All menus, search **Flow Designer**; under Process Automation open Flow Designer.
- 2 Top right, click **New** and select **Flow**.
- 3 Name: **Auto Classify School IT Tickets**. Application: **Global**.
- 4 Click **Build Flow**.

Activity 2: Trigger configuration

Trigger: **Record Created**. Table: **Incident**. Condition: **Category is Empty**. Click Done, then under Actions select **Flow Logic**.

Activities 3 to 6: Classification branches

Branch	Condition (Short description contains)	Category	Subcategory
If: Wi-Fi / Network	Wi-Fi or Network	Network	Wi-Fi
Else If: Projector	Projector	Hardware	Projector
Else If: Forgot password	Forgot password	Access	Forgot Password
Else If: Performance	Slow Computer	Performance	Slow Computer

In each branch, add an **Update Record** action. Drag the Trigger record from the data pill picker, set the Category and Subcategory fields, and click Done.

Activity 7: Email action

Setting	Value
Action	Send Email
To	Caller, then Email
Subject	Your Request for the issue has been submitted
Body	Ticket confirmation message

Finally, click **Activate** at the top right.
